# *What will change in how your business operates within the next 18 months?*
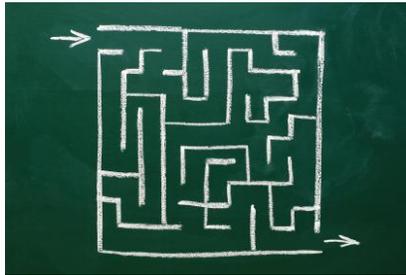

Business Process Management is the art of taking a holistic view of your business operations and improving the business processes using technologies and methodologies for bottom line improvement including cost savings, efficiencies, and improved controls.

Navigar provides Business Process Management (BPM) services to today's leading organizations following our proven methodology while leveraging existing tools and technologies.

- **Initiate:** We need to determine if a BPM project is right for your organization and then follow a strategic approach to deciding which process provides the best return on investment.
- **Implement:** Navigar follows a proven five phased approach to implementing BPM projects while leveraging existing technologies and infrastructures.
- **Improve:** Navigar recognizes that clients are at different phases of the BPM lifecycle. While some organizations may be embarking on a single Business Process Improvement (BPI) project, other clients have created Business Process Improvement programs while yet others have brought it to an environment of Continual Process Improvement (CPI).

Navigar Consulting, LLC

Business Process Management is more than just workflow, and knowing where the process begins and where it ends.

IMPROVING BUSINESS PROCESSES

Navigar improves business processes for greater efficiency, cost savings, and improved controls.

Navigar consultants have helped organizations to:

- Save $284,000 annually in the employee on-boarding process
- Reduce month end close by 5 days
- Speed up grant allocation process from 4 days to 40 seconds
- Create new operational site preparation processes resulting in reduced risk and better decision making.
- Meet new federal requirements reducing risk of non-compliance and thousands of dollars in fines

Comprehensive BPM gives you visibility and transparency into your operations. Knowing where a process is at, how long it took to get there, and where else it has to go is the first step to understanding processes and how to improve them.

Understanding the cost of a process is the first step that will lead to reducing those costs by implementing a business process management suite and changing how those processes flow.

Today's federal government and industry boards are continually calling for organizations to comply with new requirements that risk significant fines. Business processes need built in checks and balances to meet required controls and also need the agility to be able to create new checks and balances as new requirements evolve.

Navigar can help your organization to implement a Process Management solution and improve your organizational performance.
